Manual

Short description, no longer than two lines.

cmd-name	0.4.2	MIT

CMD AUTHOR.[*]

QUICK START

```
// Minimal initialization example, like:
#import "@preview/cmd-name:0.1.0": cmd
#show: cmd.with(
  name,
  author
)
```

DESCRIPTION

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aeque doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut postea variari voluptas distinguique possit, augeri amplificarique non possit. At etiam Athenis, ut e patre audiebam facete et urbane Stoicos irridente, statua est in quo a nobis philosophia defensa et collaudata est, cum id, quod maxime placeat, facere possimus, omnis voluptas assumenda est, omnis dolor repellendus. Temporibus autem quibusdam et.

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aeque doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem.

OPTIONS

Those are the full list of options available and its default values:

```
#import "@preview/cmd-name:0.1.0": cmd
#show: cmd.with(
  name: none,
  author: none,
  version: none,
  date: datetime.today()
)
```

Seems like an awfull lot to start with, but let's just break down all this to understand it better, shall we?

name: `string` `content`   (*required*)

  Explanation of what is this argument, what it does, and how to set it.

author: `string` `content`   (*required*)

  Explanation of what is this argument, what it does, and how to set it.

version: `string`   (*required*)

  Explanation of what is this argument, what it does, and how to set it.

date: `datetime`

  Explanation of what is this argument, what it does, and how to set it.

LIBRARIES CITATION

The *cmd-name* package requires the *example*[1] Typst package. To set it up you will need the *fictional*[2] Python module, or the *innexistent*[3] crate. If this package does not work, just go back to LaTeX and use *alternative*[4] instead, or delve into RegEx and oneliners with the *OG::Solution*[5] Perl module.

DISCLAIMER

This example mimics a Typst package manual, but *min-manual* is made to universally document anything, not just Typst packages.
